YOUR CARE, CONNECTED

From concern to care.

A patient portal that turns a clear request into a practical next step.

DESCRIBE | FIND CARE | BOOK

Patient requests. Care pathways. Appointments.

A SIMPLER FIRST STEP

Asking for care should not be the hard part.

Patients describe the concern. Wellby brings the next steps together.

01

Describe it once

A guided request captures symptoms, duration and impact in everyday language.

02

Find the right service

Care options are explained clearly, with the reason for the suggested pathway.

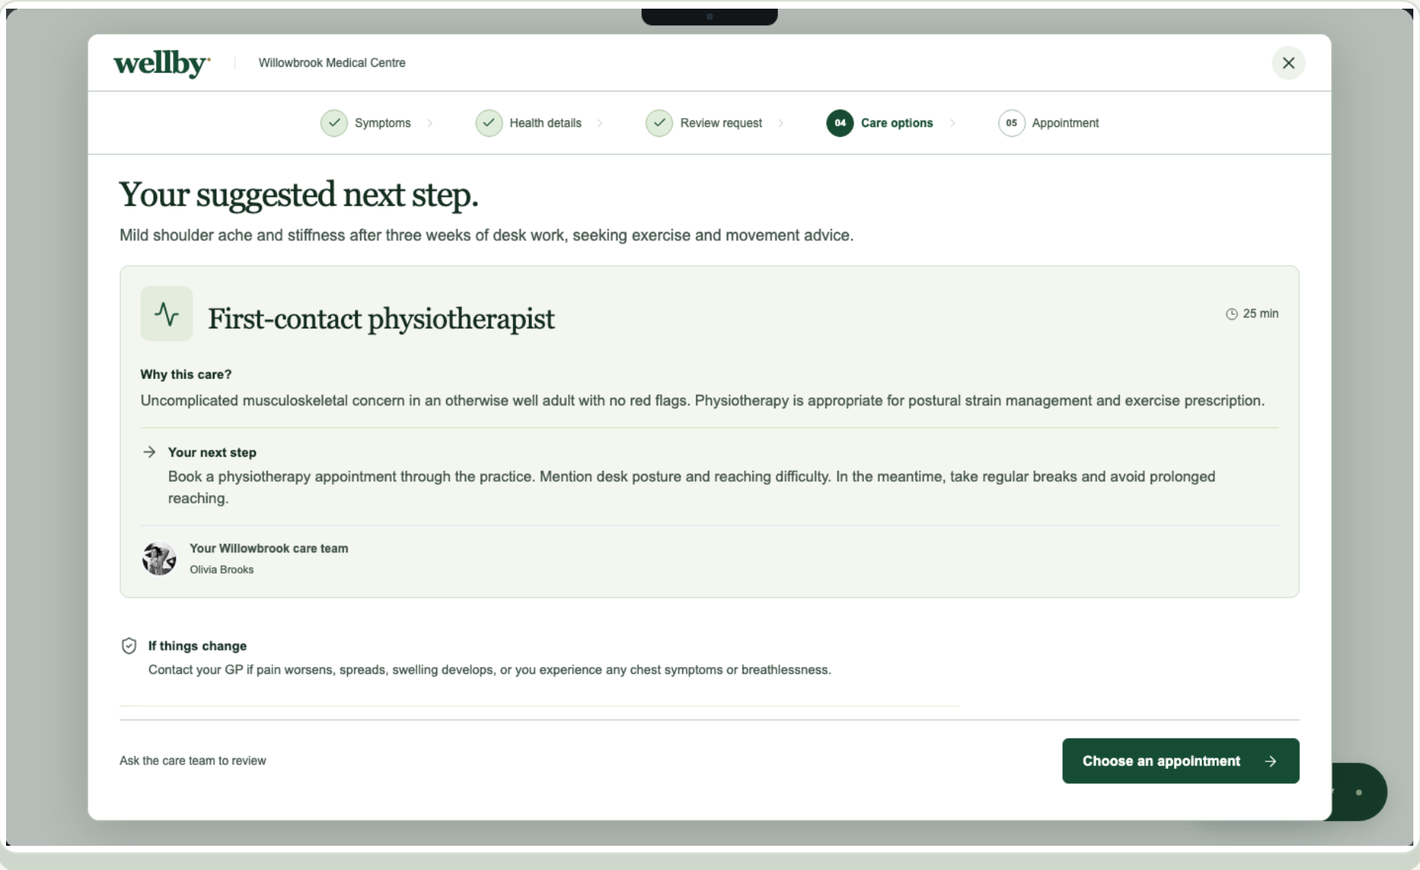

03

Keep it connected

Choose an appointment, review visit details and ask for help in the same portal.

GUIDED CARE REQUESTS

A few questions. A clearer next step.

01

In your own words

Maya explains shoulder pain and the effect on everyday movement.

02

The useful details

Duration, impact and a safety check, followed by a review.

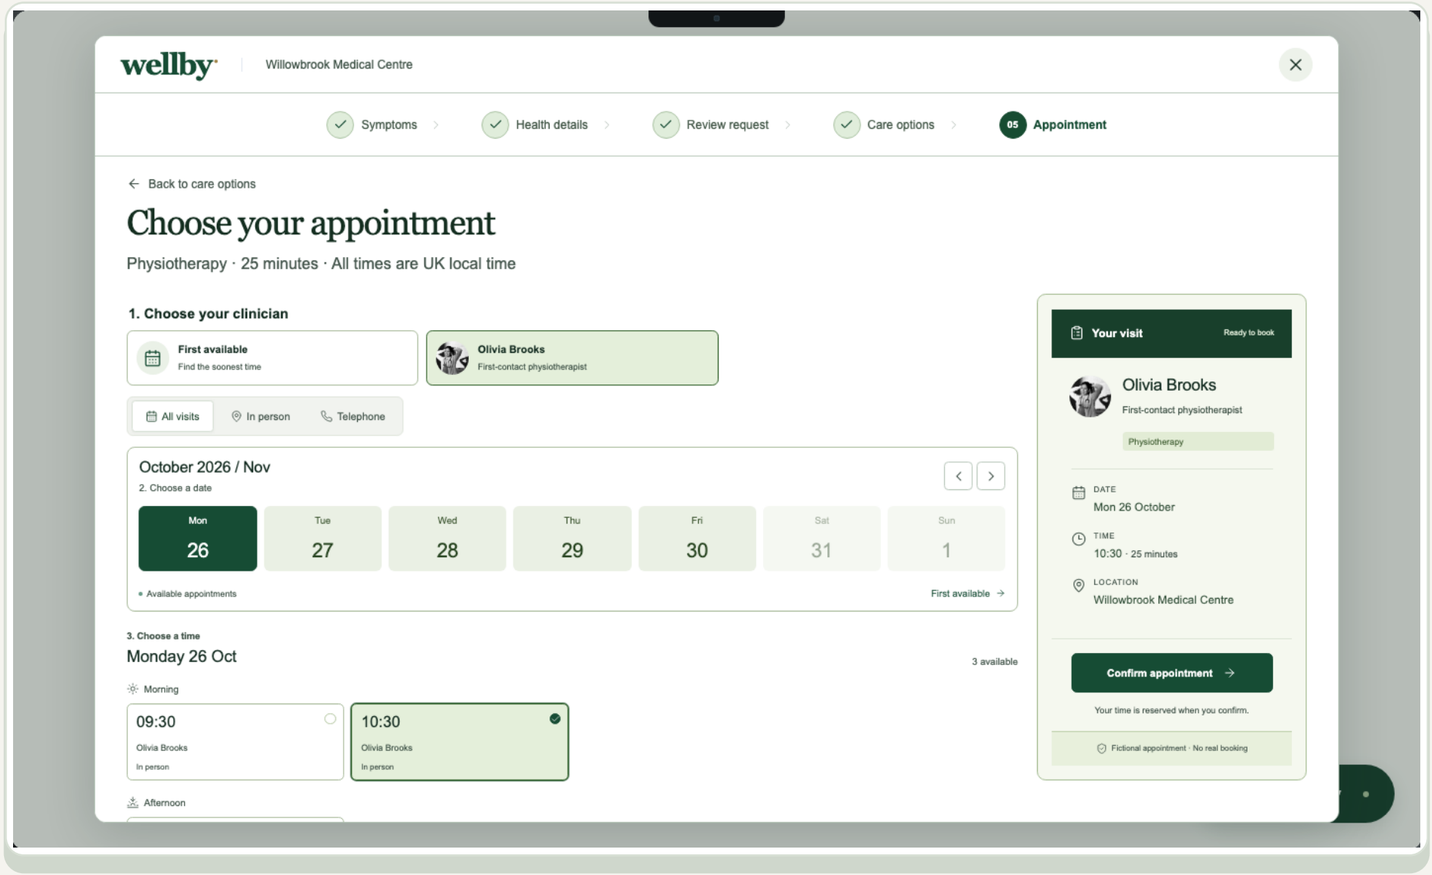

03

An explained pathway

Physiotherapy is suggested, with relevant alternatives and a next step.

APPOINTMENTS

Choose the visit. Confirm the details.

01

Choose your clinician

View the available care team, dates and appointment times.

02

Book with clarity

Check the visit, location and duration before confirming.

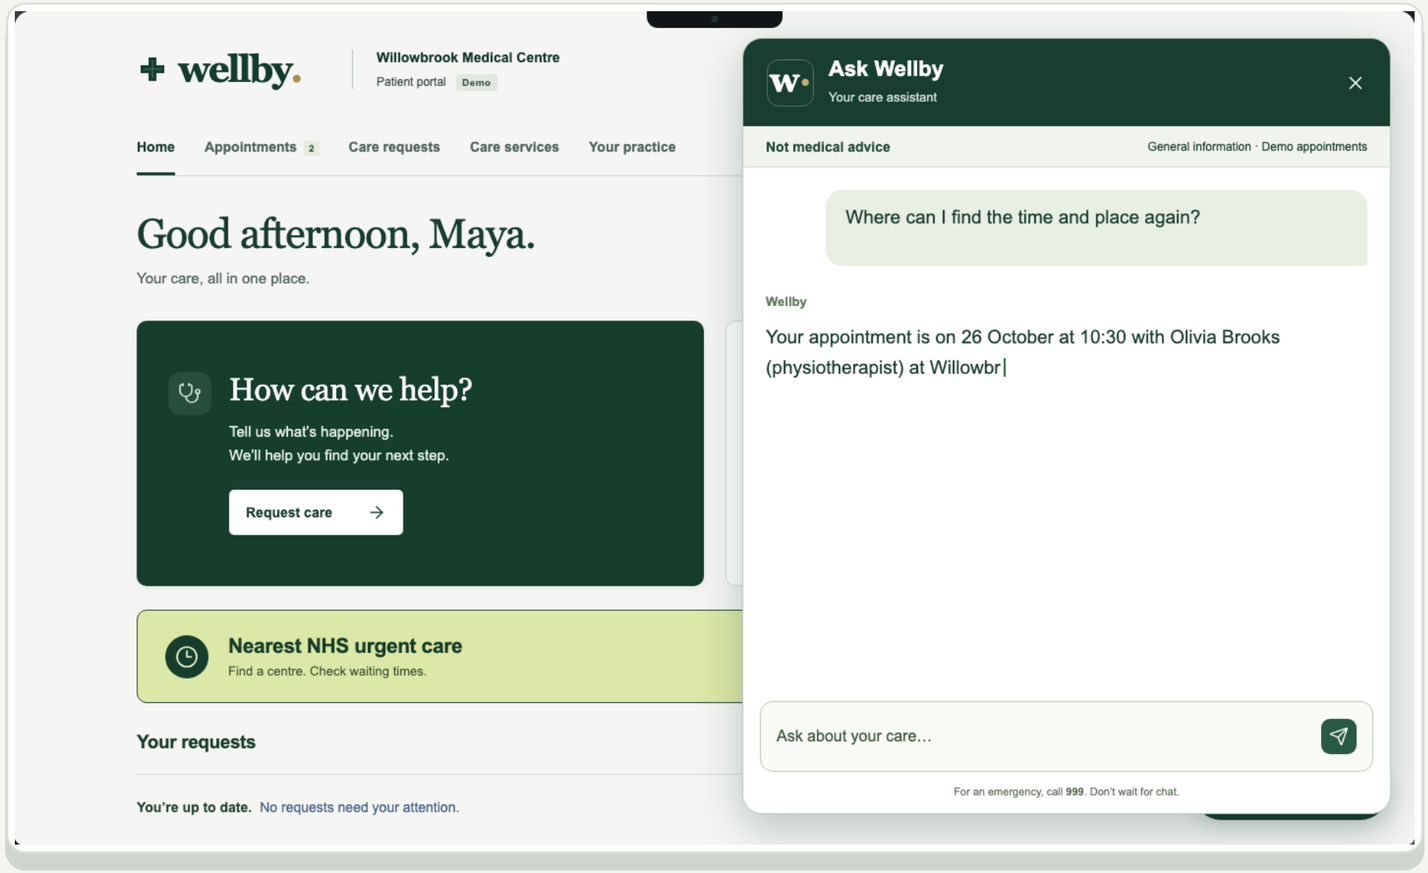

03

Everything stays together

Your request and appointment remain connected in the portal.

ASK WELLBY

A little help, right where you need it.

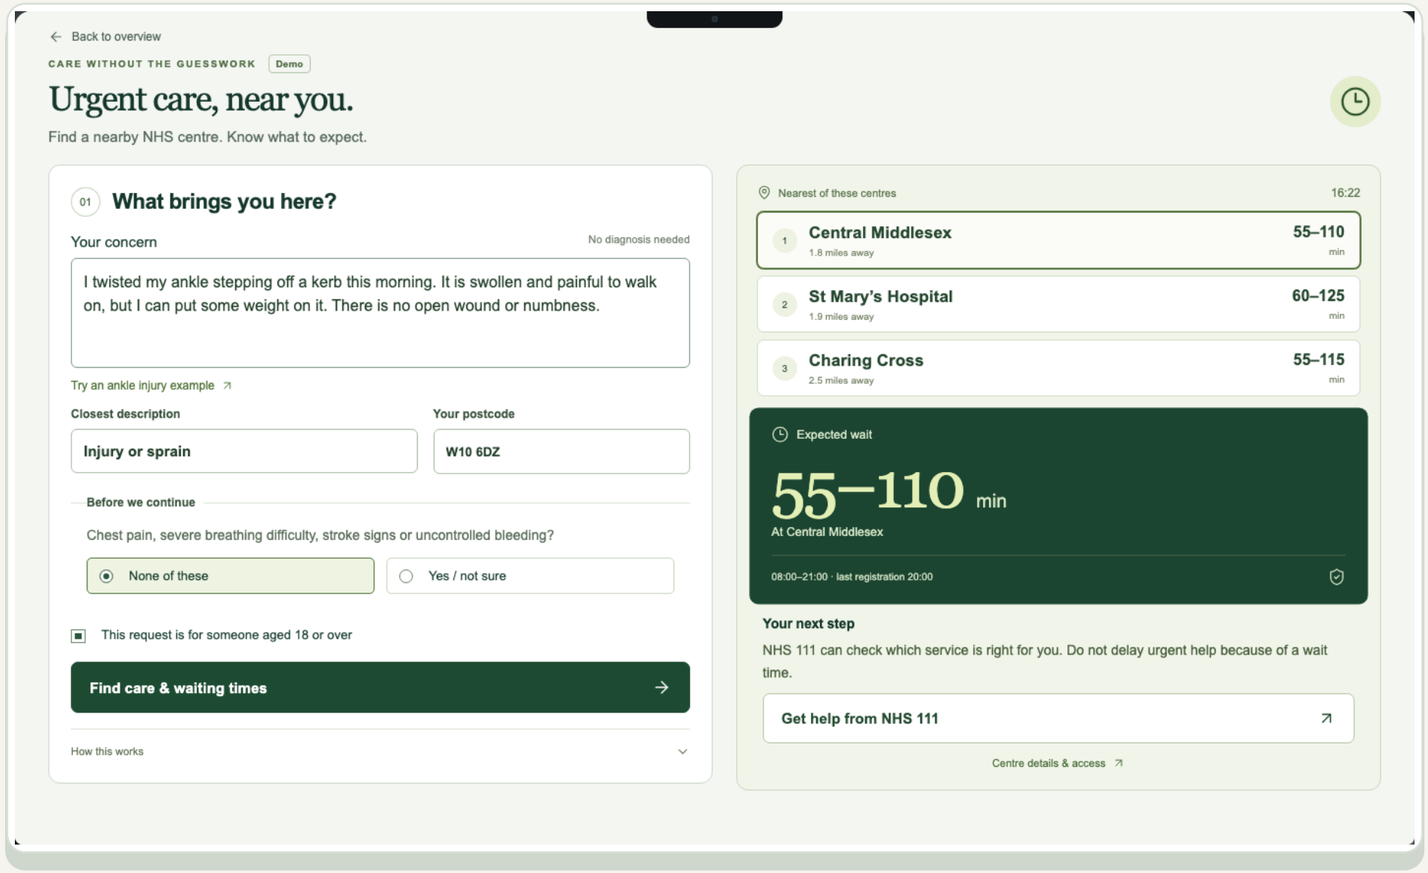

A compact care assistant.

Ask about your appointment, find your visit details, or get help preparing a care request.

The conversation stays alongside your portal, so you keep your place.

MORE WAYS TO FIND CARE

Nearby NHS care. See the waiting time.

01

Describe the urgent concern

A short safety check comes before waiting-time results.

02

Compare nearby centres

Search UK postcodes. See nearby services and available waiting-time ranges.

03

55–110 minutes

The recorded result for Central Middlesex, with access details and NHS 111 support.

BUILT WITH MUBIT

Repeated work. Focused learning.

The patient journey stays simple. Care navigation and urgent-care learning have their own workspace views.

01

Capture the task

Structured care requests and consistent provider answers create examples.

02

Review and train

Mubit reviews eligible examples, trains a specialist and evaluates its quality.

03

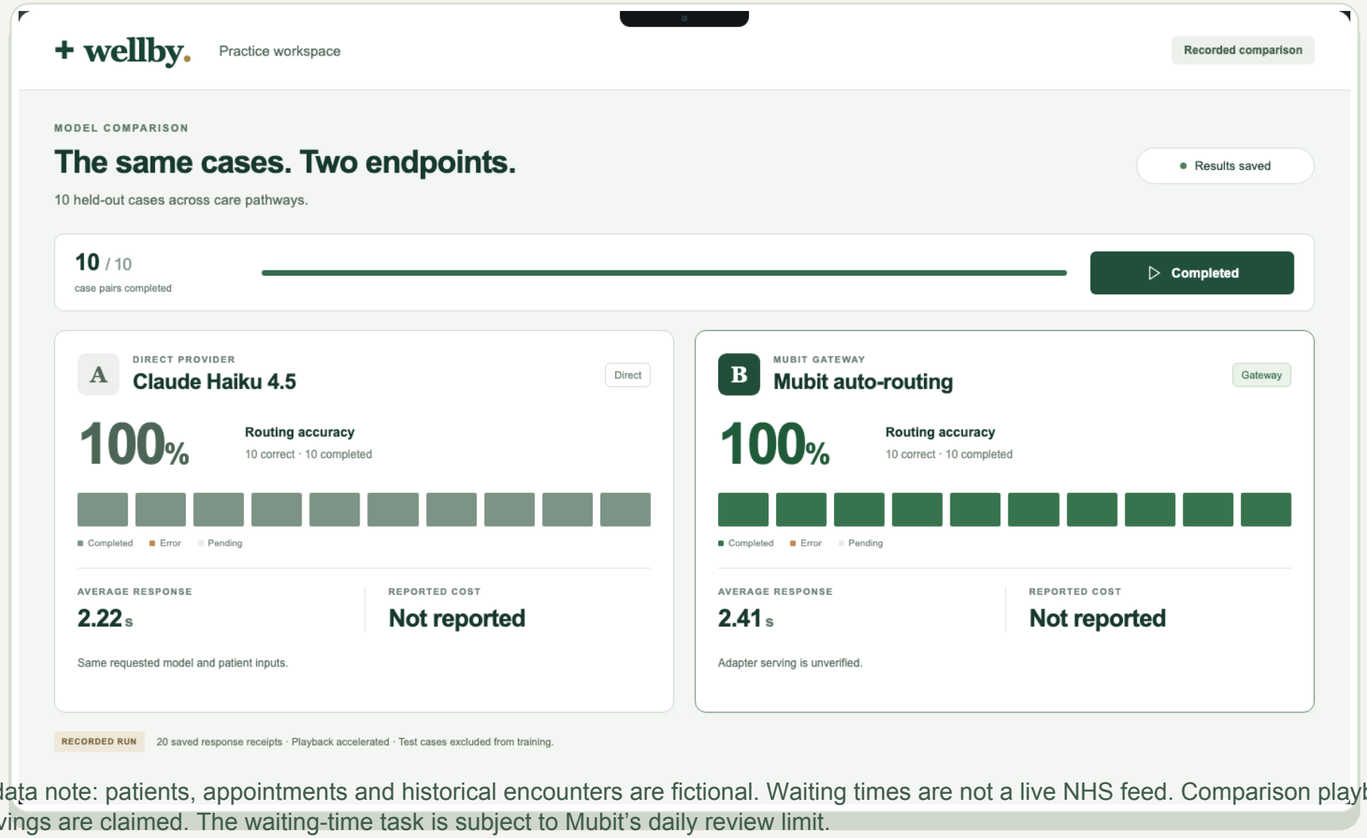

Verify the benefit

Compare held-out cases, timing and cost evidence. Check which model actually answered.

Care navigation is the core task. Waiting-time prediction is an additional task.

MEASURED EVIDENCE

The same task, compared side by side.

Direct Haiku + Mubit

10 matched care-navigation cases.
20 saved response receipts.
Same requested model and inputs.

Additional waiting-time task

500 recorded training calls.
100 held-out evaluation calls.
Mubit review is pending.

Demo-data note: patients, appointments and historical encounters are fictional. Waiting times are not a live NHS feed. Comparison playback uses recorded calls; gateway responses are not proof of adapter serving. No cost savings are claimed. The waiting-time task is subject to Mubit's daily review limit.

CARE, CONNECTED

Less back and forth. A clearer next step.

For patients: one place to ask for help.

For practices: a clearer first request.

For care: a connected journey.
